DENR-EMB opens Online Company Registration System

The Department of Environment and Natural Resources – Environmental Management Bureau (DENR-EMB) calls on companies operating in the Philippines to register online via the Company Registration System (CRS).

Registration in the CRS online is a requirement to access the EMB Online Permitting and Monitoring System (OPMS) for permits and clearances.

According to EMB Director, Engr. William P. Cuñado, the CRS online was launched in 2020 and was continuously enhanced to fully-automate the online processing of permits and registration of companies, making it more responsive, transparent, and efficient.

“Once registered in the CRS, companies will gain access to other OPMS services such as online applications for Environmental Compliance Certificate, Permit to Operate, Wastewater Discharge Permit, Importation Clearances and submission of reports, among others. They can access the system anywhere, anytime, 24/7.” Cuñado said.

To date, a total of 77, 577 number of companies are currently registered in the system.

To register, the user will log in to <https://client.emb.gov.ph/crs/login>. Each user must provide an active email account to receive all CRS notifications.

On the establishment registration, each user will be asked to provide their location and establishment name. If not provided on the list, they will be asked to manually key in the name of company, location and approved permits.

EMB assigned personnel in each region where the establishment is located will verify the request. After verification, updates will be sent to the registered email. Companies can also track the status of their CRS registration through the dashboard. Users can likewise update their profile and permits issued by EMB to reflect in the system.

Cuñado added that EMB has continuously upgraded its Online Permitting and Monitoring System (OPMS) since 2015.

“We have developed and operationalized improved version of some permitting and clearance systems to further strengthen the delivery of our services. All permitting transactions and payment can be done online. Evaluation and processing of permits can be done from practically anywhere with internet connection,” Cuñado said.

Included in the new and improved OPMS are the processing of Environmental Compliance Certificate, Permit to Operate for sources of air pollution, Registration and Importation of

Cyanide, Registration and Importation of Polymer; Online Hazardous Waste Manifest System; Self-Monitoring Report Online Reporting System; CMR Online Reporting System; and CNC Online Self-Service System which provides automatic approval of CNC application and generation of CNC immediately after the submission of required documents.###
